

# UNIVERGE® SV8000 Series Multimedia Conference Bridge

Fulfilling the promise of UNIVERGE®360

The UNIVERGE® SV8000 Series Multimedia Conference Bridge provides small, medium and expanding businesses a flexible, in-house conferencing solution that protects their communications investment while providing PC-accessible features, networking options and excellent voice quality.

## *Investment Protection*

Due to increased employee decentralization and the constant need for collaboration, owning an in-house conference system is no longer a luxury reserved for big corporations. An investment in the Multimedia Conference Bridge eliminates the ongoing cost and security risks of hosting conference calls through an outside vendor.

## *At a Glance*

- Investment protection
- Superb voice quality
- Performs with or without a network
- Impressive, PC-accessible features

The Multimedia Conference Bridge is deployable over traditional circuit-switched technology, VoIP, or a combination of technologies. Thanks to this flexibility, businesses can invest in conference bridge technology now and be confident that this investment will be a sound one today and into the future.

## *Superb Voice Quality*

The Multimedia Conference Bridge delivers up to 16 channels for conferencing and provides DSP technology to deliver superb voice quality that is fully amplified and balanced.

## *Performs With or Without a Network*

If a network is not available for the Multimedia Conference Bridge, the user can access pre-set conferences. When these pre-set conferences occur, the Multimedia Conference Bridge uses pre-configured passwords and conference durations.

## *Impressive, PC-Accessible Features*

The Multimedia Conference Bridge's extensive feature set can be accessed and managed through any PC with network access and a standard web browser. Using the intuitive graphical user interface (GUI), conferences can be scheduled up to one year in advance. If e-mail addresses are entered for participants, each participant is sent a conference schedule with a unique password for extra security.

The Conference Bridge provides support for scheduling via XML as well as WebEx and LDAP. Additionally, contact databases may be imported and exported for saving on a computer.

Additional Multimedia Conference Bridge features include:

- Dynamically allocated, fully-amplified and balanced 2-16 party conferencing
- Password protection for each conference
- Conference entry and exit voice messages
- Conference password request
- E-mail notification of pending conferences for each participant
- A Host Required option that keeps other participants from logging in to a conference before the host logs in
- Remote conference programming with Conference Scheduler
- A Web user interface for conference schedule management and administration
- Programmable gain adjustment
- DTMF detection for manual setup options

### Flexible Licensing and Simple Installation

The SV8000 Series Multimedia Conference Bridge can be configured in either Simple or Advanced mode at any time. Licensing is covered by the number of ports rather than the Multimedia Conference Bridge's configuration. Installation is made more convenient by NEC's packaging of the application on a compact flash card rather than CD or DVD. Simply place the card in the system's PVA slot, and you're ready to go!

UNIVERGE360 is NEC's approach to unifying business communications. It places people at the center of communications and delivers on an organization's needs by uniting infrastructure, communications and business.

### Specifications

Feature	Pre-Set Conference	Scheduled Conference
<b>Number of Parties in a conference</b>	2, 4, 8 or 16	Configurable up to 16 in steps of 1
